

PROJECT DESIGN PHASE -1
PROPOSED SOLUTION TEMPLATE

DATE	25 September 2022
TEAM ID	PNT2022TMID52471
PROJECT NAME	A Novel Method for Handwritten Digit Recognition System
MAXIMUM MARKS	2 Marks

Proposed Solution :

S.NO	Parameter	Description
1.	Problem Statement (Problem to be solved)	<p>Statement: The handwritten digit recognition is the capability of computer applications to recognize the human handwritten digits.</p> <p>Description: It is a hard task for the machine because handwritten digits are not perfect and can be made with many different shapes and sizes.</p>
2.	Idea / Solution description	<p>1.It is the capability of a computer to fete the mortal handwritten integers from different sources like images, papers, touch defences.</p> <p>2.It allows user to translate all those signature and notes into electronic words in a text document format and this data only requires far less physical space than the storage of the physical copies.</p>

3.	Novelty / Uniqueness	Accurately recognize the digits rather than recognizing all the characters like OCR.
4.	Social Impact / Customer Satisfaction	<p>1. Artificial Intelligence developed the app called Handwritten digit Recognizer.</p> <p>2. It converts the written word into digital approximations and utilizes complex algorithms to identify characters before churning out a digital approximation.</p>
5.	Business Model (Revenue Model)	<p>1. This system can be integrated with traffic surveillance cameras to recognize the vehicle's number plates for effective traffic management.</p> <p>2. Can be integrated with Postal system to identify and recognize the pin-code details easily.</p>
6.	Scalability of the Solution	<p>1. Ability to recognise digits in more noisy environments.</p> <p>2. There is no limit in the number of digits it can be recognized.</p>
